

ETHIOPIA

Child Stunting and Overweight

Key figures and trends

MAY 2025

STUNTING

Progress towards World Health Assembly (WHA) Global Nutrition **stunting target**.

WHA Global Nutrition Stunting Target 2012-2025

Achieve a **40%** reduction in the number of children under-5 who are stunted

- Prevalence of stunting among children under five years old has fallen since 2012 but remains *very high*.
- Rates in Ethiopia are above the UN regional average for Eastern Africa.
- Despite modest progress, Ethiopia remains highly off-track from the WHA target for child stunting, with a **gap of 12.5** between projection and target.

Figure 1: Under-five stunting prevalence, Ethiopia, 2005-2022 and projected to 2025

Table 1: Under-five (U5) Stunting Data Profile, Ethiopia

Key Indicator	Value
Baseline Prevalence 2012 (%)	42.1
Baseline U5 Population 2012 (millions)	15.5
Baseline Stunting Burden 2012 (millions)	6.5
Current Prevalence 2022 (%)	34.4
Current U5 Population 2022 (millions)	18.7
U5 Population Growth Rate 2012-2022 (%)	20.3
Current AARR* (2012-2022)	2.0
Projected Prevalence 2025 (%)	32.4
Target Stunting Burden 2025 (millions)	3.9
Projected U5 Population 2025 (millions)	19.7
Target Prevalence 2025 (%)	19.9
Required AARR (2012-25)	5.7
Classification of Country's Progress	Off track – some progress

*AARR = Average Annual Rate of Reduction

OVERWEIGHT

Progress towards World Health Assembly (WHA)
Global Nutrition **overweight target**.

- Prevalence of overweight among children under five years old, while *low* in Ethiopia, has risen since 2012.
- Rates in Ethiopia remain below the UN regional average for Eastern Africa.
- Ethiopia is nevertheless on-track to meet the WHA target for child overweight given UNICEF's methodology and its current AARR. There remains a **gap of 0.3** between projection and target.

Figure 2: Under-five overweight prevalence, Ethiopia, 2005-2022 and projected to 2025

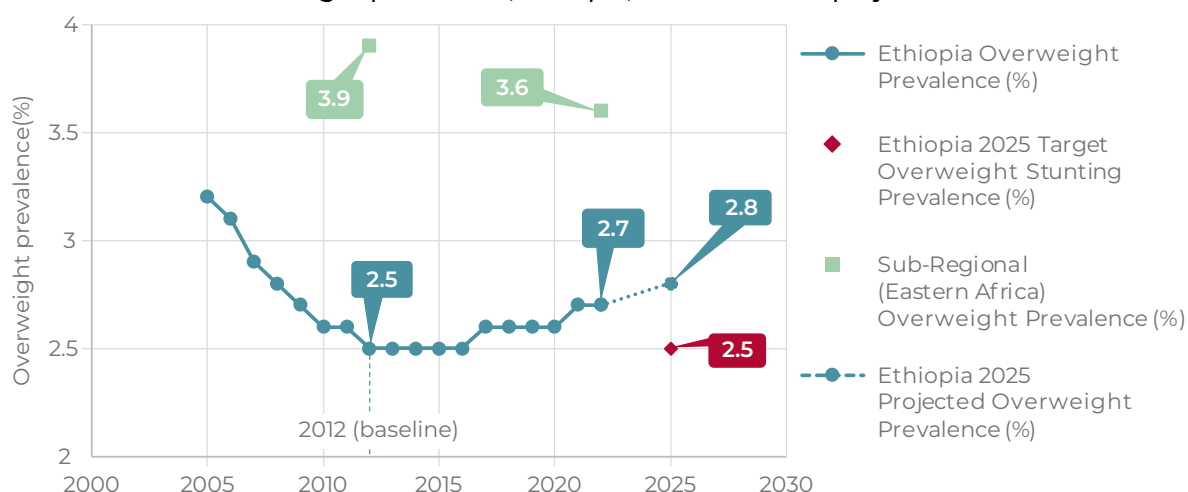

Table 2: Under-five (U5) Overweight Data Profile, Ethiopia

Key Indicator	Value
Baseline Prevalence 2012 (%)	2.5
Current Prevalence 2022 (%)	2.7
Current AARR* (2012-2022)	-0.8
Projected Prevalence 2025 (%)	2.8
Target Prevalence 2025 (%)	2.5
Required AARR (2012-25)	0.0
Classification of Progress	On track

*AARR = Average Annual Rate of Reduction

Data sources: Joint Malnutrition Estimates for stunting and overweight prevalences. Population from United Nations World Population Prospects. Classifications of progress are aligned with UNICEF methodology and determined by current AARR thresholds.
