Child Stunting and Overweight

Key figures and trends

MAY 2025

STUNTING

WHA Global Nutrition
Stunting Target
2012-2025
Achieve a 40% reduction in the number of children under-5 who are stunted

Progress towards World Health Assembly (WHA) Global Nutrition **stunting target.**

- Prevalence of stunting among children under five years fell between 2012 and 2022 but remained *very high* in 2022.
- Rates in Tanzania are extremely close to the UN regional average for Eastern Africa.
- Rates are projected to fall from very high to high by 2025, but Tanzania remains considerably
 off-track from the WHA target for child stunting, with a gap of 12.2 between projection
 and target.

Figure 1: Under-five stunting prevalence, Tanzania, 2005-2022 and projected to 2025

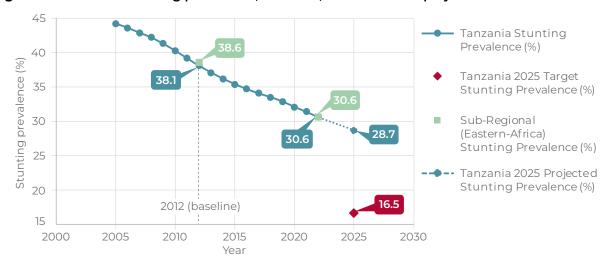

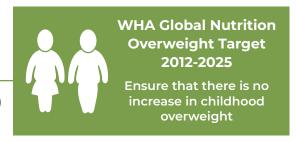

Table 1: Under-five (U5) Stunting Data Profile, Tanzania

Key Indicator	Value
Baseline Prevalence 2012 (%)	38.1
Baseline U5 Population 2012 (millions)	8.1
Baseline Stunting Burden 2012 (millions)	3.1
Current Prevalence 2022 (%)	30.6
Current U5 Population 2022 (millions)	10.6
U5 Population Growth Rate 2012-2022 (%)	30.8
Current AARR* (2012-2022)	2.1
Projected Prevalence 2025 (%)	28.7
Target Stunting Burden 2025 (millions)	1.9
Projected U5 Population 2025 (millions)	11.2
Target Prevalence 2025 (%)	16.5
Required AARR (2012-25)	6.4
Classification of Country's Progress	Off track – some progress

OVERWEIGHT

Progress towards World Health Assembly (WHA) Global Nutrition overweight target.

- Prevalence of overweight among children under five years old grew very slightly between 2012 and 2014, after which it remained steady. Levels are low.
- Rates in Tanzania remain above the UN regional average for Eastern Africa.
- Tanzania is nevertheless on-track to meet the WHA target for child overweight given UNICEF's methodology and its current AARR. There remains a small gap of 0.1 between projection and target.

Figure 2: Under-five overweight prevalence, Tanzania, 2005-2022 and projected to 2025

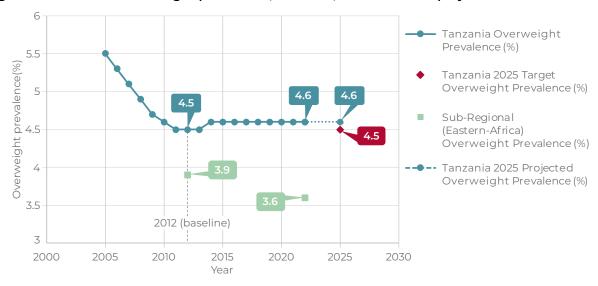

Table 2: Under-five (U5) Overweight Data Profile, Tanzania

Key Indicator	Value
Baseline Prevalence 2012 (%)	4.5
Current Prevalence 2022 (%)	4.6
Current AARR* (2012-2022)	-0.2
Projected Prevalence 2025 (%)	4.6
Target Prevalence 2025 (%)	4.5
Required AARR (2012-25)	0.0
Classification of Progress	On track

^{*}AARR = Average Annual Rate of Reduction

Data sources: Joint Malnutrition Estimates for stunting and overweight prevalences. Population from United Nations World Population Prospects. Classifications of progress are aligned with UNICEF methodology and determined by current AARR thresholds.
